## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 6\_COD\_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

John and Mary are collaborating on a project that involves data analysis. They each have a set of age data, one sorted in ascending order and the other in descending order. However, their analysis requires the data to be in ascending order.

Write a program to help them merge the two sets of age data into a single sorted array in ascending order using merge sort.

#### **Input Format**

The first line of input consists of an integer N, representing the number of age values in each dataset.

The second line consists of N space-separated integers, representing the ages of participants in John's dataset (in ascending order).

The third line consists of N space-separated integers, representing the ages of participants in Mary's dataset (in descending order).

Output Format participants in Mary's dataset (in descending order).

The output prints a single line containing space-separated integers, which represents the merged dataset of ages sorted in ascending order.

Refer to the sample output for formatting specifications.

### Sample Test Case

```
Input: 5
13579
    108642
    Output: 1 2 3 4 5 6 7 8 9 10
    Answer
    #include <stdio.h>
    void merge(int arr[], int left[], int right[], int left_size, int right_size) {
       int i = 0, j = 0, k = 0;
       while (i < left_size && j < right_size) {
        if (left[i] <= right[j]) {</pre>
            arr[k] = left[i];
            i++:
         } else {
            arr[k] = right[j];
            j++;
         k++;
       while (i < left_size) {
         arr[k] = left[i];
```

```
while (j < right_size) {
     arr[k] = right[i];
     j++;
     k++;
}
void mergeSort(int arr[], int size) {
  if (size < 2) {
     return;
  }
  int mid = size / 2;
  int left[mid], right[size - mid];
  for (int i = 0; i < mid; i++) {
    left[i] = arr[i];
  for (int i = mid; i < size; i++) {
     right[i - mid] = arr[i];
  }
  mergeSort(left, mid);
  mergeSort(right, size - mid);
  merge(arr, left, right, mid, size - mid);
int main() {
  int n, m;
  scanf("%d", &n);
  int arr1[n], arr2[n];
  for (int i = 0; i < n; i++) {
     scanf("%d", &arr1[i]);
  for (int i = 0; i < n; i++) {
     scanf("%d", &arr2[i]);
                                                       240701352
  int merged[n + n];
  mergeSort(arr1, n);
mergeSort(arr2, n);
  merge(merged, arr1, arr2, n, n);
```

<pre>for (int i = 0; i &lt;</pre>	n + n; i++) { merged[i]);	240101352	240 <sup>101352</sup> Marks : 10/10
